IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)

SWTID-2026-3705

Project Information	Details
Project Title	Import Data Using Transform Maps (Spreadsheet)
Project ID	SWTID-2026-3705
Platform	ServiceNow
Implementation Type	Spreadsheet data import using Import Set and Transform Map
Evidence	ServiceNow screenshots supplied for the project workflow

This document records the demonstrated workflow for importing spreadsheet data into ServiceNow through an Import Set and applying a Transform Map to move the staged records into a target table.

1. Workflow Information

Step	Process	Information shown in the supplied screenshots
1	Open ServiceNow tables	System Definition → Tables / Tables & Columns is shown.
2	Load spreadsheet data	Load Data page shows an Import Set table and spreadsheet file upload.
3	Create target table	A custom Employee Test table is shown being created.
4	Create Transform Map	Transform Map form shows source table and target table selection.
5	Run / transform import	Import Set Run progress shows records processed and the next-step workflow.

2. Key Configuration Details

Field	Value / Description
Source format	Spreadsheet (.xlsx)
Import Set table	Employee Import (u_employee_import) — as shown in the supplied screenshot
Target table	Employee Test (u_employee_test) — as shown in the supplied screenshot
Transform Map	Configured between the source/import table and target table
Spreadsheet settings	Sheet number 1 and header row 1 are shown

Step 1 — ServiceNow Table Navigation

The screenshot shows ServiceNow navigation with System Definition and the Tables option selected. This is the starting point for working with the required tables.

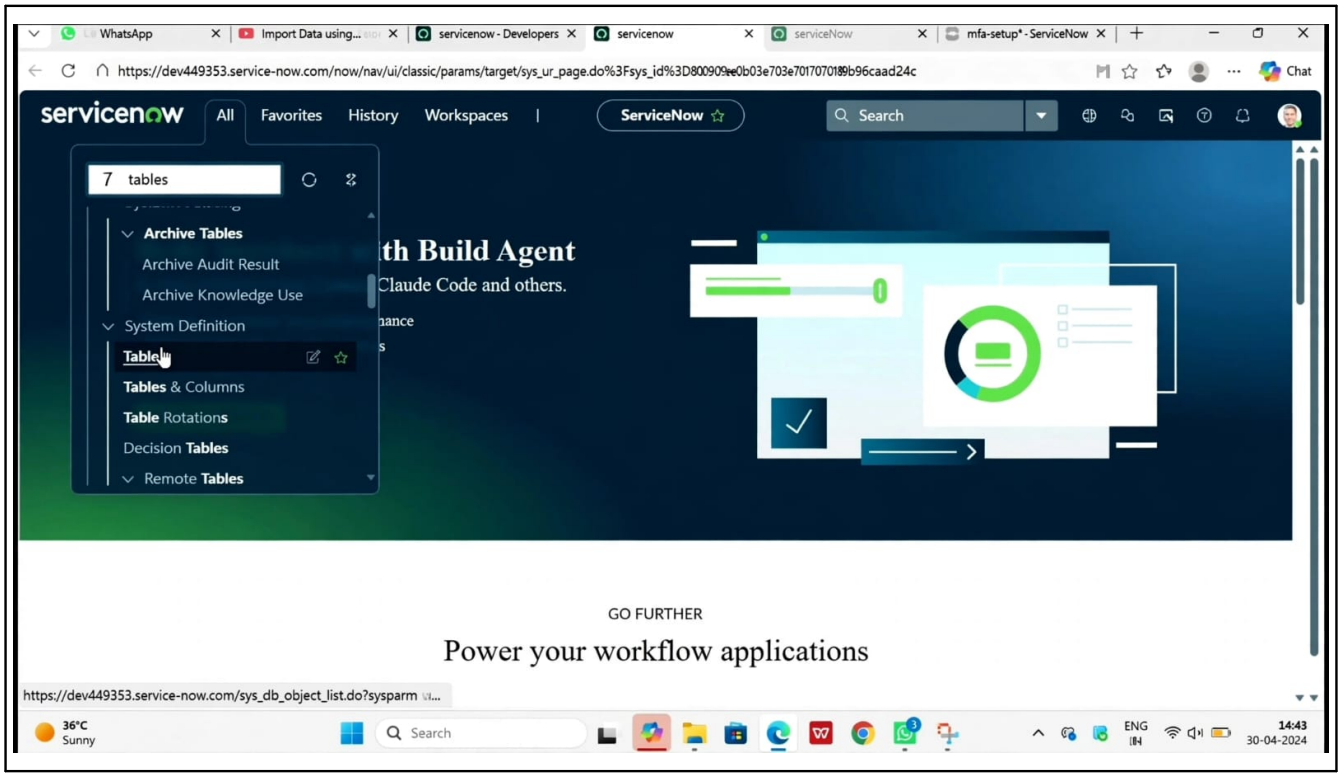

Figure 1: Supplied ServiceNow project evidence

Step 2 — Load Spreadsheet Data

The Load Data screen shows creation of an Import Set table, selection of a spreadsheet file, sheet number 1, and header row 1.

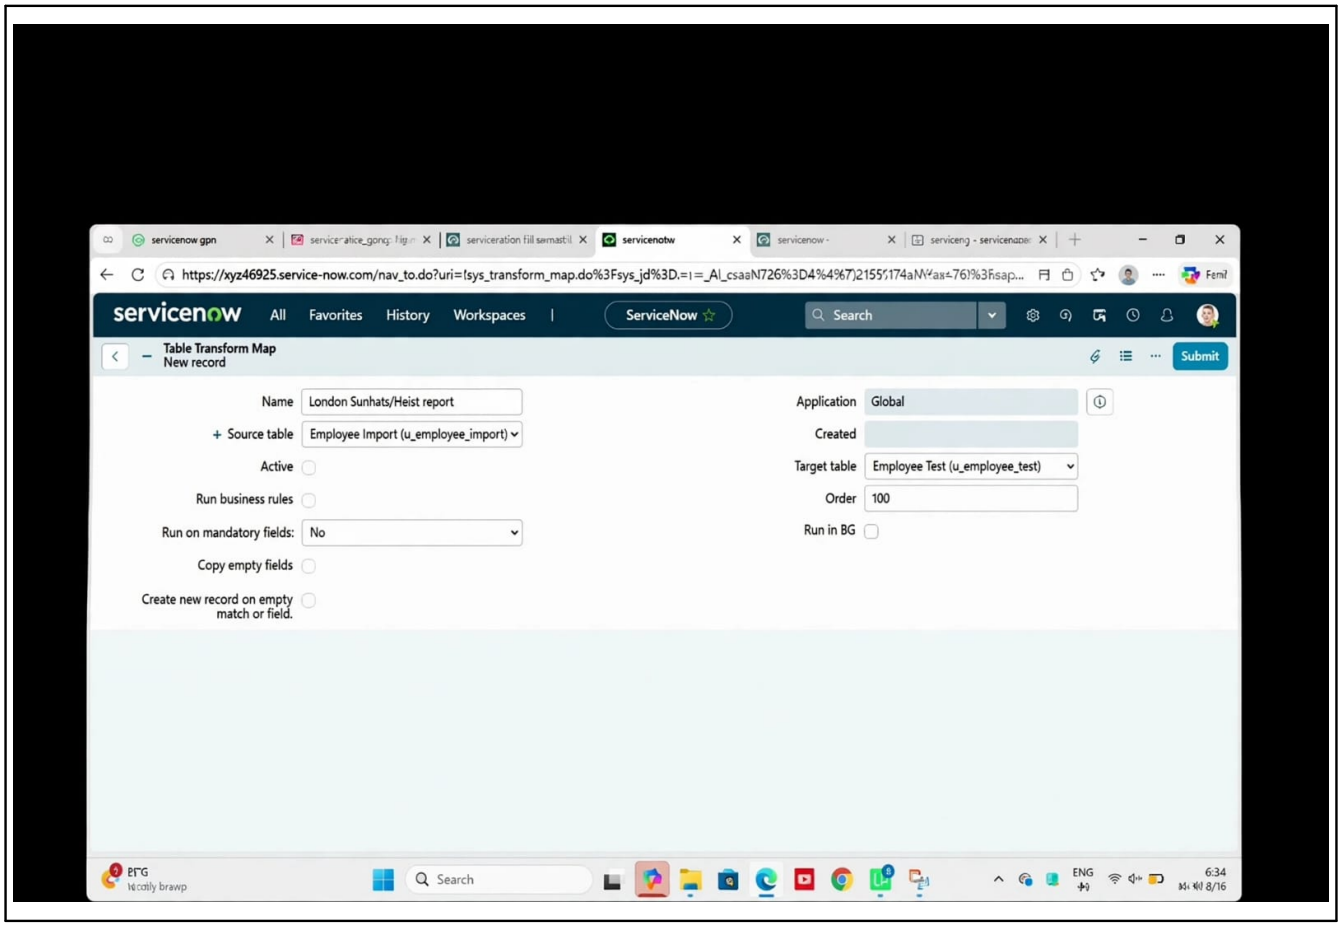

Figure 2: Supplied ServiceNow project evidence

Step 3 — Create the Target Table

The Table – New record screen shows the Employee Test table and its generated name u_employee_test, with the table configuration area visible.

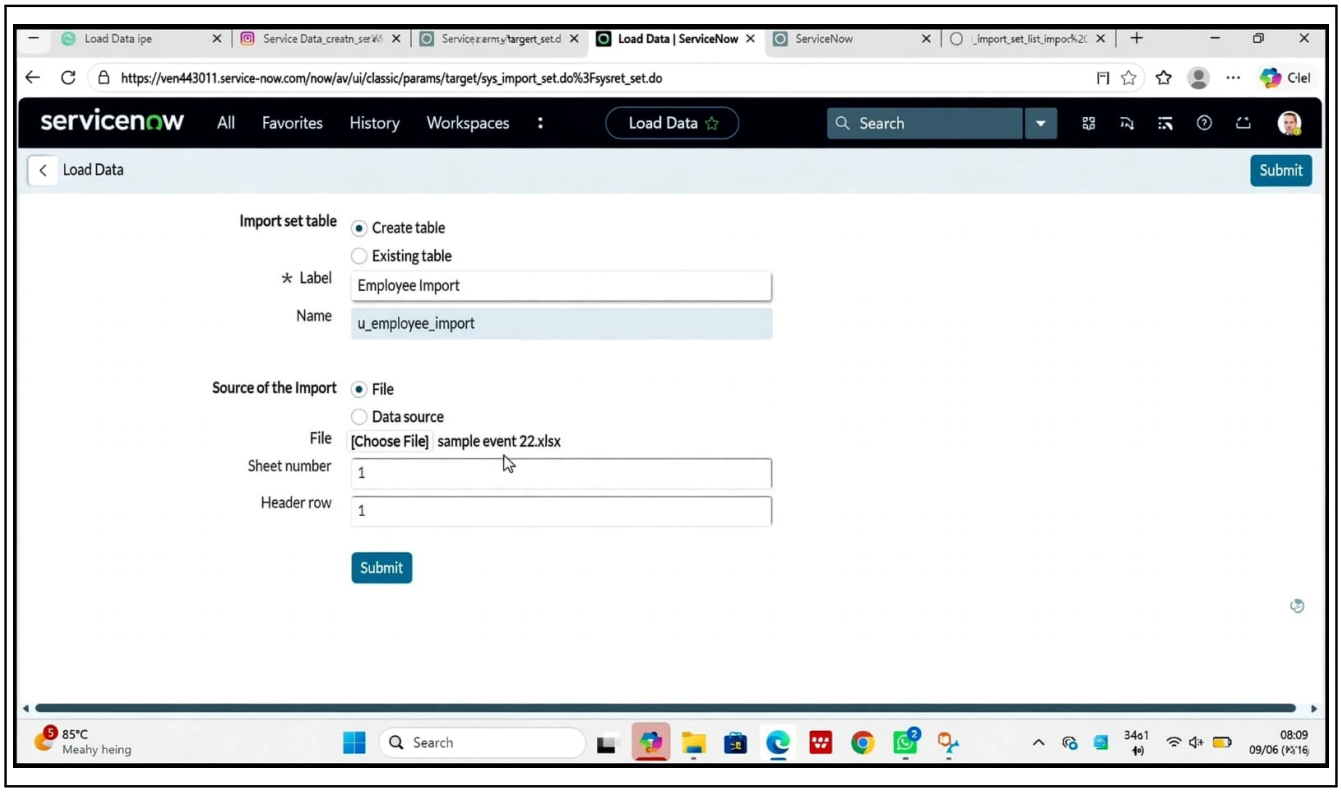

Figure 3: Supplied ServiceNow project evidence

Step 4 — Create the Transform Map

The Transform Map – New record screen shows the source table Employee Import (u_employee_import) and target table Employee Test (u_employee_test).

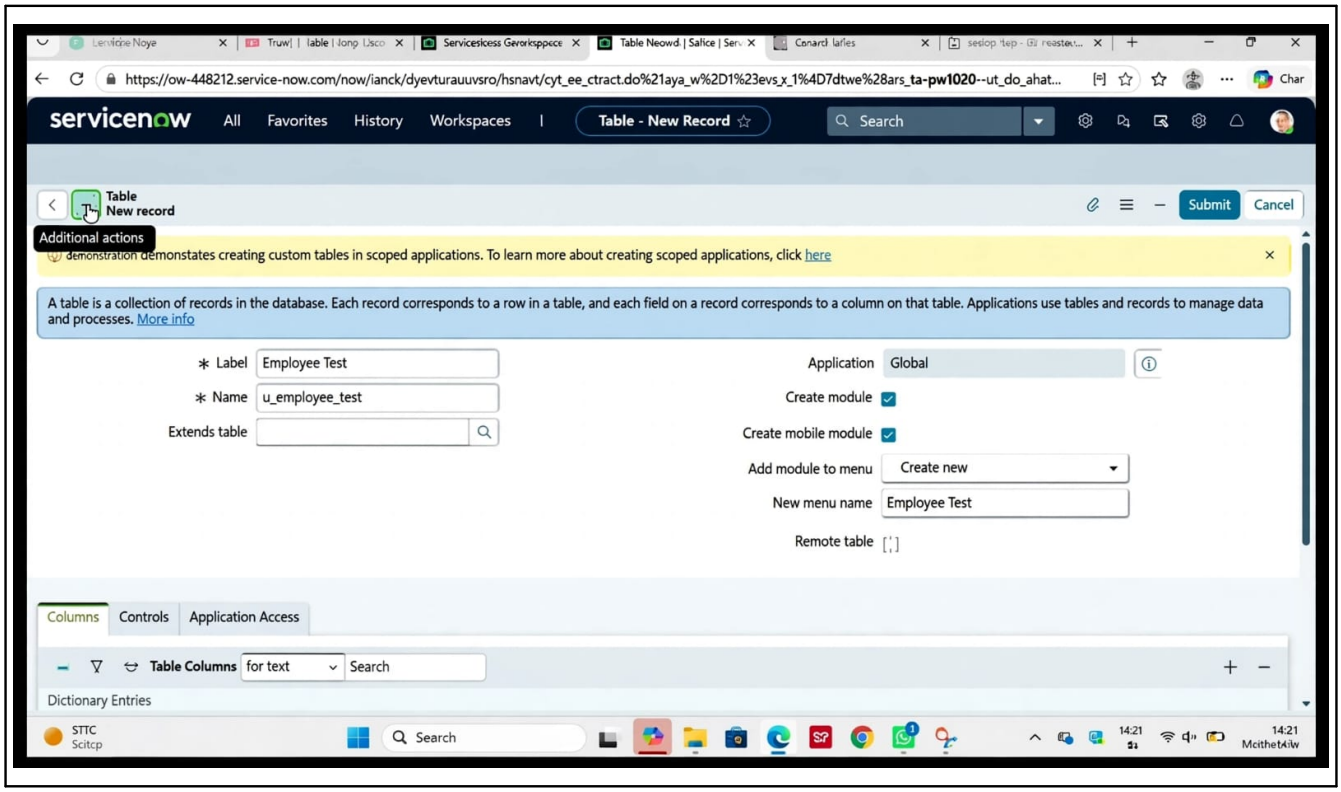

Figure 4: Supplied ServiceNow project evidence

Step 5 — Import Set Run Result

The Import Set Run progress screen shows the import/transform process result and lists the next steps for continuing the workflow.

3. Project Completion Summary

Item	Recorded Information
Project	Import Data Using Transform Maps (Spreadsheet)
ID	SWTID-2026-3705
Source	Spreadsheet data
Staging / Import	Import Set table
Transformation	Transform Map
Destination	Target ServiceNow table
Evidence	ServiceNow workflow screenshots supplied by the user
